

## Jungle Music Microsite: Initial Build Notes

Creative Director: Fiona Lyons-Carlson

Designer & Developer: Aiden Cole

- Designer plans to:
  - Style images differently
    - Current rounded edges are working nicely
    - Could add a light colored stroke on the outside of the images to distinguish them from the gray background more
  - Find distinct images for each of the individual pages
  - Make navigation bar stick to top
    - Button and hover state ideas:
      - Vinyl buttons that pop up or spin when hovered over
    - Navigation bar doesn't have to be large to fit vinyl buttons
    - Instead, the buttons could float on the screen or exist on a slightly transparent background
  - Add typefaces
  - Add 1-2 more subgenres
    - Gabber could be one
  - Add song links
    - One link per subgenre, and perhaps one link on the homepage
    - Not too many external links so as to not overload the website with links
- Overall, the website is looking good
  - Not much CSS styling has been put into place yet
  - We were primarily reviewing structure and content of the website, which are both successful
  - All of the feedback I provided last week has been enacted, or there are goals in place to enact it soon
