Project Title: Jungle Music Website

I'd like this website to be structured as multiple pages that can be toggled between via a navigation bar at the top of the page. The home page will be first and reference page will be last. Content for each page is delineated below and corresponds with the sections found on the "Jungle music" Wikipedia page.

- **Home Page/Introduction** – I anticipate this being a page that includes a small amount of text introducing what jungle music is, using a visual language that feels relevant to the genre's sound and historic origins.
- **Origin**
- **Rise and Popularity** – This page may include a subsection dedicated to describing the subgenres within jungle music.
- **Sociocultural Context**
- **Re-emergent jungle scene**
- **References**
